

SPM is a World-class multi-disciplinary engineering, management and development company delivering solutions touching many facets of everyday life-from Transport, Energy, Building, Water and the Environment to Industry, Communications, Social Development, Health, Education and scientific research project to maximise the carbon- sequestration effect in each area, within the sustains of the Clean Development Mechanism ("CDM"), Reforesting areas in Developing Countries

(Under the Kyoto Protocol's.)

SPM is an independent company with good turnover and staff engaged in public and private sector development from nearly 30 centres throughout the world and offices in over 30 countries across Europe, Asia and the Pacific, the Middle East, Africa and the Americas.

We combine a century's experience of railway development around the world with the skill; enthusiasm and commitment of top-class rail Professionals.

The track record of the key staff in all types of rail development in many countries means we're fully equipped to help plan new services, network modernisations or conversions of existing lines to different usage.

We have expertise in forecasting revenue, assessing technical economic feasibility, evaluating passenger and freight demand, optimising alignment and ensuring that environmental considerations are fully taken into account.

## SAHARA PROJECT MANAGEMENT

SPM is a World-class multi-disciplinary engineering, management and development company delivering solutions touching many facets of everyday life-from Transport, Energy, Building, Water and the Environment to Industry, Communications, Social Development, Health, Education and scientific research project to maximise the carbon- sequestration effect in each area, within the sustains of the Clean Development Mechanism ("CDM"), Reforesting areas in Developing Countries

(Under the Kyoto Protocol's.)

SPM is an independent company with good turnover and staff engaged in public and private sector development from nearly 30 centres throughout the world and offices in over 30 countries across Europe, Asia and the Pacific, the Middle East, Africa and the Americas.

We combine a century's experience of railway development around the world with the skill; enthusiasm and commitment of top-class rail Professionals.

The track record of the key staff in all types of rail development in many countries means we're fully equipped to help plan new services, network modernisations or conversions of existing lines to different usage.

We have expertise in forecasting revenue, assessing technical economic feasibility, evaluating passenger and freight demand, optimising alignment and ensuring that environmental considerations are fully taken into account.
